

Brilliant doctors. A determined family. A generous community.
Some diseases hardly stand a chance.

Tom struggled as a newborn, and by age one he still wasn't sitting up on his own. His pediatrician suspected Tom might have mitochondrial disease, an illness that's difficult to diagnose. She sent him to Seattle Children's, where mitochondrial disease expert,

Hope. Dr. Russ Saneto, developed a special vitamin treatment for Tom. His condition steadily improved, but his parents wanted to help find a cure. So they joined the Mitochondrial Research Guild at Children's,

whose fundraising efforts help support clinical care for children suffering from the disease, and innovative research into new ways to fight it. And they couldn't do it without the support of generous donors. Because when you help us, it helps all children. To learn more, volunteer or donate, go to seattlechildrens.org.
