Early detection is key for the successful treatment of breast cancer. So are digital mammograms, which are proven to be more accurate than standard x-rays in detecting possible abnormalities in women under the age of 50. That’s why Hoboken University Medical Center is pleased to offer the latest in digital mammography. We’re one of the few Hudson area hospitals that can produce superior imaging for a better, faster diagnosis and added peace of mind. Digital mammograms. Just another way we’re changing more than our name.

Hoboken UMC offers a comprehensive range of radiology services for women that includes digital mammograms, breast MRI, bone density scans and uterine fibroid embolizations. To learn more, call (201) 418-3085 or visit hobokenumc.com.

Hoboken University Medical Center ‘Thinks Pink’
At Hoboken University Medical Center our ultimate goal is a healthier community, which is why we’re “Thinking Pink” in recognition of Breast Cancer Awareness Month, October 1-31.
